URGENT CARE VISIT NOTE

Date of service 2026-10-25
MRN WUC-0048213
Account No. A-77310452

PATIENT

Name	Jordan Alvarez	**Date of birth**	1999-08-02	**Sex**	M
Address	41 Fennimore Court, Port Alder, CA 94997			**Phone**	(510) 555-0173
Financial class	Self-pay; third-party liability claim (event medical payments)			**PCP**	None on file

VISIT

Date of service	2026-10-25	**Arrival time**	10:40	**Visit type**	New patient, walk-in
Provider	Corinne Vasquez-Hale, MD	**NPI**	1386402271	**Discharged**	11:45
Chief complaint	Left wrist pain and swelling after a fall last night.				

HISTORY OF PRESENT ILLNESS

Patient presents with left wrist pain and swelling. Last night, Saturday, October 24, 2026, at approximately 21:45, he was attending Cal Hacks 13.0 when the crowd surged near Main stage and he fell, landing on the outstretched left wrist. He did not strike his head and had no loss of consciousness. He was seen at the event's on-site first-aid station, where ice and a compression wrap were applied. Pain has persisted overnight with increasing swelling. Rates pain 6/10, dorsal wrist, worse with gripping and wrist extension. Took acetaminophen 1,000 mg at 07:00 today with minimal relief. Denies numbness, tingling, weakness, or other injuries. Right-hand dominant. No prior left wrist injury.

HISTORY / REVIEW OF SYSTEMS

PMH / PSH None / None
Medications None (acetaminophen as above)
Allergies No known drug allergies
Social Never smoker. Occasional alcohol. Software developer.
ROS Negative except as in HPI. Denies headache, neck pain, chest pain, dizziness.

VITAL SIGNS / PHYSICAL EXAM

Vitals (10:48) BP 128/80 Pulse 82 Resp 14 SpO2 99% RA Temp 98.6 °F Pain 6/10
General Well appearing, alert and oriented, in mild distress due to pain.
Left wrist Moderate dorsal swelling. Tenderness over the dorsal radiocarpal joint. No deformity. No anatomic snuffbox tenderness. No distal radius or ulnar styloid point tenderness. Range of motion limited by pain in flexion and extension. Grip strength reduced due to pain.
Left hand / elbow No tenderness. Full range of motion of fingers and elbow.
Neurovascular Radial pulse 2+, capillary refill < 2 s, sensation intact in median, ulnar and radial distributions.
Skin Intact. No abrasions or lacerations.

IMAGING

X-ray left wrist, 3 views (PA, lateral, oblique), 2026-10-25 10:58. No acute fracture or dislocation. Carpal alignment maintained; scapholunate interval normal. Mild dorsal soft-tissue swelling. **Impression:** soft-tissue swelling, no fracture. Preliminary read by treating provider; final read concordant (Marcus Oyelaran-Byrd, MD, Radiology).

ASSESSMENT

#	ICD-10-CM	DESCRIPTION
1	**S63.502A**	Sprain of left wrist, initial encounter
2	**W01.0XXA**	Fall on same level from slipping, tripping and stumbling without subsequent striking against object, initial encounter

PLAN / PROCEDURES

1. Ketorolac 15 mg IM, right deltoid, at 11:05. Tolerated without reaction.
2. Static volar short arm splint (forearm to hand) applied to the left, wrist in neutral. Neurovascular status intact after application.
3. Prefabricated wrist-hand orthosis dispensed for use after the splint is removed (days 5–7). Fit checked.
4. Tdap booster given at the patient's request (last tetanus shot over 10 years ago); not related to today's injury.
5. Rest, ice, elevation. Acetaminophen per label. May start ibuprofen 400 mg every 6–8 h with food, no sooner than 6 h after ketorolac.
6. Follow up with orthopedics or this clinic in 7–10 days if not improving; repeat X-ray in 10–14 days if snuffbox tenderness develops. Return sooner for numbness, color change, or increasing pain.

Disposition: Discharged home in stable condition at 11:45. Work note: modified duty, no lifting over 5 lb with the left hand for 7 days. Patient verbalized understanding.

Electronically signed by **Corinne Vasquez-Hale, MD** (NPI 1386402271) on 2026-10-25 12:05
