URGENT CARE VISIT NOTE

Date of service 2026-10-25
MRN WUC-0048227
Account No. A-77310466

PATIENT

Name	Sam Patel	**Date of birth**	1997-11-21	**Sex**	M
Address	3906 Ondine Terrace, Unit 12, Port Alder, CA 94996			**Phone**	(510) 555-0158
Financial class	Self-pay; third-party liability claim (event medical payments)			**PCP**	None on file

VISIT

Date of service	2026-10-25	**Arrival time**	09:15	**Visit type**	New patient, walk-in
Provider	Nadia Ferro-Kimura, PA-C	**NPI**	1467550983	**Discharged**	10:05
Chief complaint	Right ankle pain and swelling.				

HISTORY OF PRESENT ILLNESS

Patient presents with right ankle pain and swelling. He states he twisted his right ankle (inversion injury) while playing pickup basketball at home on the evening of Friday, October 23, 2026, before attending Cal Hacks 13.0. He was able to walk afterward and did not seek care that night. The pain and swelling got worse while he was walking around the event on Saturday, October 24, 2026, and today he has difficulty bearing full weight. Denies any new fall, twist, or other injury since the initial injury. Rates pain 6/10, lateral ankle, worse with weight bearing. Took ibuprofen 400 mg last night with partial relief. Denies numbness or tingling. No prior right ankle injury.

HISTORY / REVIEW OF SYSTEMS

PMH / PSH None / None
Medications Ibuprofen as needed
Allergies No known drug allergies
Social Never smoker. Occasional alcohol. Graduate student.
ROS Negative except as in HPI. Denies knee pain, back pain, fever.

VITAL SIGNS / PHYSICAL EXAM

Vitals (09:22) BP 124/76 Pulse 76 Resp 14 SpO2 98% RA Temp 98.2 °F Pain 6/10
General Well appearing, alert and oriented, no acute distress.
Right ankle Moderate swelling and ecchymosis over the lateral ankle. Tenderness over the anterior talofibular ligament and at the posterior edge of the distal lateral malleolus. No medial malleolus, base of fifth metatarsal, or navicular tenderness. Anterior drawer mildly lax, limited by guarding. Range of motion reduced due to pain.
Gait Antalgic. Able to take four steps with a limp.
Right knee / foot No tenderness. Proximal fibula non-tender.
Neurovascular Dorsalis pedis and posterior tibial pulses 2+, capillary refill < 2 s, sensation intact.
Skin Intact. No abrasions or lacerations.

IMAGING

X-ray right ankle, 3 views (AP, lateral, mortise), 2026-10-25 09:34. Ordered per Ottawa ankle rules (posterior lateral malleolus tenderness). No acute fracture or dislocation. Ankle mortise congruent. Lateral soft-tissue swelling. **Impression:** soft-tissue swelling, no fracture. Final read concordant (Marcus Oyelaran-Byrd, MD, Radiology).

ASSESSMENT

#	ICD-10-CM	DESCRIPTION
1	**S93.401A**	Sprain of unspecified ligament of right ankle, initial encounter
2	**Y93.67**	Activity, basketball
3	**Y92.009**	Unspecified place in unspecified non-institutional (private) residence as the place of occurrence

PLAN / PROCEDURES

1. Posterior short leg splint (calf to foot) applied to the right, ankle in neutral. Neurovascular status intact after application.
2. Rest, ice 20 minutes every 2–3 hours, elevation. Weight bearing as tolerated in the splint; patient has crutches at home and was advised to use them as needed.
3. Ibuprofen 400–600 mg every 6–8 h with food as needed, or acetaminophen per label.
4. Gentle range-of-motion exercises when pain allows (handout given).
5. Follow up with sports medicine or orthopedics in 7–10 days if not improving. Return sooner for numbness, color change, or increasing pain.

Disposition: Discharged home in stable condition at 10:05. Patient verbalized understanding.

Electronically signed by **Nadia Ferro-Kimura, PA-C** (NPI 1467550983) on 2026-10-25 10:30 · Supervising physician: Corinne Vasquez-Hale, MD
